

HSC – High Speed Cremulator

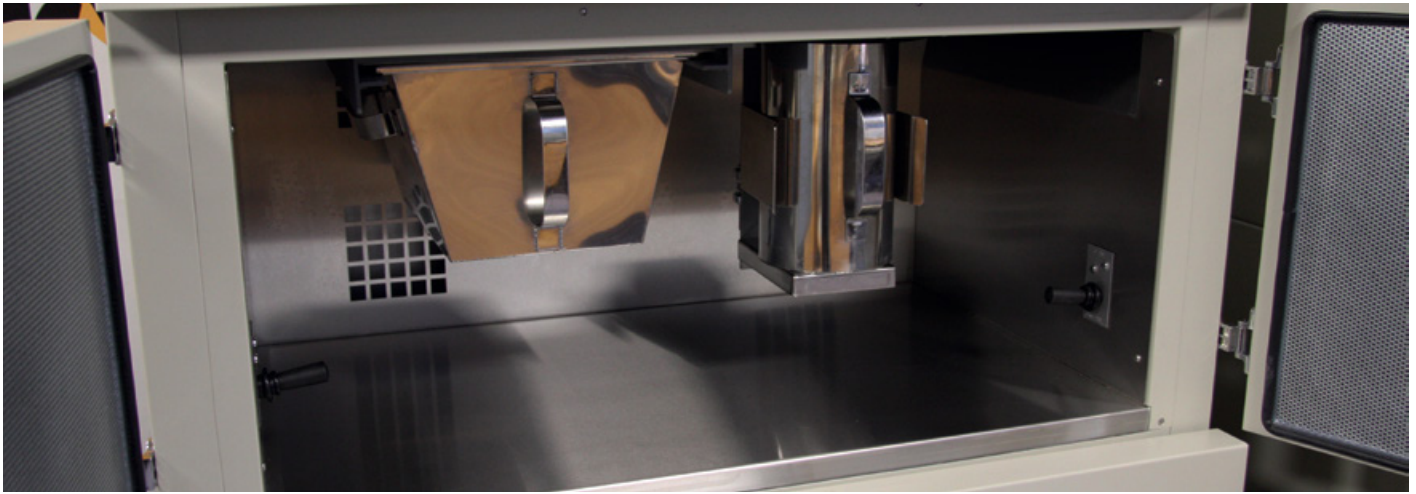

The High Speed Cremulator is a PLC controlled cremulator that is specially designed to satisfy the specific requirements of a modern crematorium. Any metals are directly separated from the ash. Fully automatically and in just 3 minutes. It is provided with touch screen controls and has low noise characteristics.

ATC - Ash Transfer Cabinet

The Ash Transfer Cabinet removes dust quickly and efficiently. Its powerful suction capacity means it is no longer necessary to implement far-reaching safety measures that used to be required. This means the Ash Transfer Cabinet – which of course complies with all regulations and standards – significantly contributes to pleasant, safe and healthy working conditions.

The combination of cremulator and ash transfer cabinet may be optionally connected to an existing system (Health & Safety legislation)

The Ash Transfer Cabinet works seamlessly together with our fully automated High Speed Cremulator.

HSC - High Speed Cremulator

Technical Data	
Height:	6' 2"
Width:	3' 7 ³ / ₄ "
Depth (max):	2' 6 ⁵ / ₁₆ "
Framework:	Painted mild steel
Cabinet Finish:	Powder coated mild steel
Inner Cabinet Finish:	Brushed Stainless steel
Electrical Supply:	15 amps, 208-230 Volts, 60 Hz, single phase
Controls:	Programmable Logic Controller
Operated:	Via dedicated Human Machine Interface

ATC - Ash Transfer Cabinet

Technical Data	
Height:	6' 2"
Width:	2' 5 ¹ / ₂ "
Depth:	2' 6 ¹ / ₄ "
Fan motor size:	1.1 kW, 220 Volts, three phase (inverted control)
Nominal air volume extracted:	486 cu.ft/min
Filter media & area:	Terylene Needlefelt, 27 sq.ft.
Electrical Supply:	15 amps, 208-240 Volts, 60 Hz, single phase when used as a stand-alone unit
